Job Title—Senior Back-end Developer (C# / SQL Server)

Opportunity Summary

We are looking for a full-time, detail-oriented, Senior Back-end Developer (C# / SQL Server) to join our rapidly expanding and socially responsible business.

Repeatedly recognized as one of Canada's Best Workplaces by Great Place to Work, LifeSpeak is a fast-growing, SaaS provider of mental health and wellbeing education with a rapidly expanding global presence. We provide organizations with mental health and wellbeing resources to support their employees, their customers, and their families, so they can stay healthy and present and live their best lives. Our educational on-demand platform features over 2,300 micro-learning videos, blogs, podcasts, and tip sheets from more than 300 world class experts. We support a diverse array of clients around the globe, including Fortune 500 companies, government agencies, insurance providers, and other health technology firms.

Location: Our office is in downtown Toronto, ON. You have the option of working fully remote or on a hybrid work schedule.

Reporting to: Senior Director of Innovation, Architecture and Security, within our Development Team

Primary Responsibilities: As Senior Back-end Developer you will contribute significantly to our .NET 6.0 web platform. You will:

- Take the lead on the development, documentation, and maintenance of our .NET 6.0 Web platform
- Coach and assist other developers working with back-end technologies
- Working to improve our 3rd party integration by creating and developing SAML SSO integrations, and REST-based APIs
- Assist in resolving issues and tickets related to platform functionality
- Act as technical contact for customers, QA and internal business clients as needed Assist in building and shaping the architecture across our technology stack.

Requirements:

- At least 5 years experience with C# development, building both APIs and Console applications, with at least 1 years' experience with .NET core (or higher).
- Experience taking a lead role developing complex software systems that have successfully been delivered to customers.
- Strong knowledge of web security and data handling for personal and sensitive information
- Experience writing unit tests with XUnit/NUnit and mocking libraries
- Experience configuring and developing SAML based SSO applications.

- Excellent communications skills; ability write documentation and create data visualization, and experience using tools such as Swagger for building interactive API documents.
- Degree or diploma in computer science or related field
- The ability to trace application, deployment or build failures and resolve technical issues with minimal direction.

It would be a bonus if you have:

- Experience with monitoring tools, such as Pingdom or AppOptics
- Experience using Azure DevOps for CI/CD
- Experience working with Cloud-based IaaS platforms such as Azure and AWS

Compensation:

- Competitive salary
- 20 days paid time off
- Benefits Coverage
